Manure container

This manure container has a capacity of no less than 2,400 litres. That is about as much as 12 full wheelbarrows. That makes the manure container perfect to use when mucking out your stables. You don't have to keep walking up and down with your wheelbarrow. When the container is full, you can empty it with a loader.

STAINLESS STEEL
The manure container is made of stainless steel. The material's oxide skin seals off the underlying material well, preventing rust formation. This is convenient, especially since the fertiliser container will come into contact with a lot of ammonia from the horse manure. This keeps it looking like new for years.

Easy to manoeuvre
With its four pneumatic tyres, two of which are castors, the manure container is easy to manoeuvre around your barn. An additional advantage is also that this makes it not heavy to move around. As a result, anyone in the stables can work with it.
