Arena Leveller EN

This leveller is fitted with coil springs with adjustable working depth, compression roller and swivel mechanism. The swivel mechanism ensures that the arena leveller follows the tractor and that in the corners, the sand is not pushed to the side.

Adjustable working depth
The coil springs loosen the top layer of the track, 2 blades level the surface which is then compressed by the back roller. The coil springs of this track harrow are adjustable in working depth and are thus ideal for mixed-content surfaces.

Eigenschappen

Specificaties

Dimensions	200 cm or 240 cm
Type of connection	3-point connection
Working depth	Adjustable
Weight	327 kg or 350 kg
Number of knives	2
