Cyro-Horse cooler

Cryo-Horse “The next Generation” is a cooling device for treating all types of inflammation and swelling without wasting precious time. It consumes no ice or gas only electricity. Therefore, due to its controllable temperature in the cooling pads, you will never have freezing wounds either and there is no need to place a cloth between the cooling pad and the trauma being treated. Tests in the university showed that inflammation levels in the blood dropped 14 times faster than the same treatment with ice or cold packs. Also, the cold penetrated 3cm deep into the tissue and after 15 minutes there was a 10°C difference at that depth while the cold of ice only penetrated 4mm.

The best preventive treatment against inflammation and super for tendons, hooves, swellings and strains.

Through intense adjustable cooling, Cryo-Horse helps you to:

Treating acute tendonitis or other inflammation
Decongesting joints and squeaky heels
Lowering inflammation levels in the blood
Treating back problems
Treating ovaries of mares having difficulties with fertility
As everyone may know, trauma is treated most effectively by cooling the site of trauma.

Why is it best to choose this kind of treatment?
First and foremost, to quell the swelling of the tissue that will result from the accumulation of oedema, preventing further injury.
Second, to prevent inflammation, which automatically follows trauma, from developing.
Third, to lower the CRP (C-Reactive Protein) level in the blood.

What is C-Reactive Protein?
C-Reactive protein (CRP) is an acute phase reactant, produced by the body in response to acute trauma, inflammation or other sources of inflammation.
Fourth, to ease the pain and make you feel relaxed.
And finally, to ensure better blood flow, giving the body a chance to eliminate toxins faster.

The Cryo-Horse will achieve all these things through the intense cooling it induces.
Tests and trials have proven that this kind of application reduces the CRP value by 150%, makes swellings (wound fluid) disappear in 3 days or faster, greatly accelerates rehabilitation and either avoids inflammations or quells them very quickly and this without the use of additional anti-inflammatories. Cooling tendons contributes significantly to speeding up the recovery process.

The cooling pads can be applied directly to the skin, no danger of frostbite!
The intense adjustable cooling works up to 10 times deeper than common cooling methods!
The intense adjustable cooling also works for much longer!

The Cryo-Horse is available in 2 variants:

With 2 cooling pads (mobile in flight case)
With 4 cooling pads suitable for installation in stables or trucks
Also available for human sports: CRYO-HUMAN.
Also available: infrared thermometer. With this, inflammation points can be located in the horse.
