# Arena Leveller FLC Duo

This leveller is designed for the larger businesses with larger riding arenas and is available in the working widths of 3 to 6 metres. Even very large arenas, maneges or trotting tracks can be professionally and efficiently maintained with this leveller. The folding mechanism means that the width is reduced to about 1.9m so standard gate widths cause no problems. The hydraulic system of the folding mechanism is supplied by the towing vehicle or by an electrical oil pump mounted on the arena leveller.

## Eigenschappen

## Specificaties
