BEMER Horse-Set

Advanced PEMF therapy for optimal equine performance

The BEMER Horse-Set is an innovative system that uses pulsed electromagnetic fields (PEMF) to improve microcirculation in horses. Due to the improved blood flow, oxygen and nutrients are transported to the cells more efficiently, contributing to faster recovery after exercise and increased vitality. This makes the BEMER Horse-Set ideal for both sport and recreational horses that benefit from improved physical fitness.

The set consists of a therapeutic blanket, two leg covers and a specially designed cervical applicator for targeted treatment of the cervical spine and surrounding structures. All components are wireless, easy to operate and equipped with integrated signal controllers with rechargeable batteries. Thanks to the practical carrying case, sweat blanket and charger with Y-cable, the set is ready to use in any stable environment. The neck application is a valuable addition, especially for horses with tension in the topline or neurological support.

Eigenschappen

Specificaties

Technical specifications	BEMER Horse-Set
Therapy form	3 programmes of 5, 10 and 15 minutes
Treatment programmes	Aluminium
Blanket	19 flexible coils, material: 100% polyester (outside), 100% nylon (inside), padded with wadding
Leg caps	3 spools per hood, material: 60% polyester, 40% nylon (outer), 100% polyester (inner)
Flux density	Blanket: average ≈35 µT; Leg caps: average ≈100 µT
Control unit	Dimensions: 190 x 100 x 37 mm; Material: TPR75A, PC/GF; Protection class: IP54
Battery	Li-ion 7.2V, 2350 mAh; up to 15 applications per charge
Accessories	Neck application, carrying case, sweat blanket, charger with Y-cable, international adapters

Van stal tot rijbaan, betrouwbare oplossingen voor elke paardenhouder
